

# Nissan JUKE's Stress-Free Driving Guide

We all love that feeling of having a good time out on the road. Nissan JUKE has a few tips and tricks for keeping the good times going when you're back behind the wheel again.

## Did you know...

### HANDS FREE FOR STRESS FREE!

New research from Nissan<sup>1</sup> has found that using the phone whilst driving is European drivers' number one WORST driving habit. As well as being dangerous, it can also cause in-car arguments with passengers who feel unsafe!

JUKE drivers can minimise any discord with their passengers thanks to seamless smartphone integration with NissanConnect, making and receiving hands-free calls simple and safe. And with the compatibility of Apple CarPlay and Android Auto, incoming calls and messages can be safely digested.<sup>2</sup>

### GOOD MUSIC: THE KEY TO JOYFUL DRIVING

55%

of Europeans believe good music is the most important ingredient for an enjoyable car journey! Have a great journey by ensuring everyone has time to shine as a DJ and taking it in turns to select songs. Agree on a playlist with your passengers before you depart.

JUKE occupants can enjoy their road-trip playlists using JUKE's NissanConnect infotainment system which connects seamlessly to smartphones, and enjoy exquisite audio with the Bose Personal Plus system for driver and front passenger, either from the JUKE's onboard player or via Apple CarPlay or Android Auto. All passengers can also use JUKE's In-Car Wi-Fi hotspot to enjoy their own tunes if they prefer!<sup>2</sup>

### SMOOTH SAILING

46%

of European drivers single out tailgating as one of the most irritating driving habits behind the wheel! Keep any sudden surprises at bay by giving yourself at least two seconds' following distance to the vehicle in front (remember, this is a bigger gap the faster you are driving!).

JUKE's ProPILOT advanced driving assistance system not only helps drivers maintain a set distance on the highway – it also accelerates and decelerates to match the car in front and will help the JUKE stay in lane.<sup>2</sup>

### ENJOY A BREAK

Nearly one in five European drivers admit to battling through tiredness and not stopping regularly on long journeys. We all feel drained during a long car journey, so take the time to pull over and have a rest; whether it's a nap or a coffee, it'll keep you alert and everyone on-board safe and sound.

JUKE can identify if the driver is showing signs of fatigue. Intelligent Driver Alertness keeps a watchful eye on the driver's steering patterns, and alerts them with a chime and a coffee cup icon on the display screen to remind them to take a break.<sup>2</sup>

### SPOT THE CAR

56%

of European car passengers admit that dangerous and misjudged overtakes make them feel most uneasy in the car. When going for the overtake, always take a good look around to make sure the next lane is clear and there's nothing coming up quickly behind you.

JUKE's Blind Spot Intervention gives drivers a heads-up if it detects a vehicle in an adjacent lane on the highway. If the driver doesn't respond, it will help the car to return to its original lane with braking intervention.<sup>2</sup>

NISSAN

<sup>1</sup> OnePoll surveyed 2000 respondents from the UK, France, Germany, Spain, and Italy from 4th March 2021 to 10th March 2021. The survey was conducted online using panel members who are credited to participate in surveys. Respondents who are car drivers and drive with friends, family or colleagues were targeted using screening questions and profile data in order to ensure the correct demographic was achieved.

<sup>2</sup> Features available depending on version, as standard or only as option.
